MagIQtouch WI-FI Kit P/No.118352.

This kit includes a WIFI module with upgraded electronics P/No.118291-Y10. The WIFI module no longer requires to be powered by a plug transformer and is not provided in this kit. A 10m cable is supplied in place of the 20m cable.

The new WIFI module gets its power from either the heater or cooler directly through the communications cable.

The benefits of this upgrade include:

- No need to consider or fix a GPO
- Easier to locate / fix the WIFI module closer to the customers home router to gain optimum WIFI signal strength.

The maximum cable run from the heater or cooler appliance to the MagIQtouch wall controller, including the WIFI module can, be no longer than **30m.**

A plug transformer can still be applied to the upgraded WIFI module. This will increase the cable run from the heater or cooler appliance to the MagIQtouch wall controller, including the WIFI module to **40m max.**
