

THE SMARTER INSTALL

Give your customers more control over their hot water, energy use and power bill with our new app-enhanced electric range.

THERMANN
SMART ELECTRIC

WHAT MAKES IT SO SMART?

With built in Wi-Fi and the easy-to-use **Thermann Control app**, the Smart Electric range lets your customers:

- ▶ View energy use and power cost.
- ▶ Program the water heater to operate more efficiently. For example, when PV solar is available or power tariffs are lowest.
- ▶ Lower tank temperature to maximise savings, while keeping anti-legionella cycle.
- ▶ Remotely turn the water heater on or off before holidays or when the house is vacant.
- ▶ Personalise the heating cycle based on machine-analysed usage patterns to reduce energy use by keeping heating to a minimum.

Element size range 1.8–3kW.
Plug-in models available in 125L, 160L and 250L (2.4kW only).

WHY WILL YOUR CUSTOMERS LOVE IT?

The ultimate benefit of the units' smart features is their ability to reduce power use, and because of that, save your customers money. For customers with PV solar, common scenarios could see them saving up to \$700 or even up to \$1,000 per year. And for those with a TOU tariff system, they could save up to \$600 per year for high tariff scenarios or up to \$400 per year for lower tariff scenarios.*

WHY WILL YOU LOVE IT?

The new range has the same footprint, dimensions and connection points as other Thermann electric units. They can be easily installed with a restricted electrical licence, so you won't need an electrician. Plus, you can choose a convenient plug-in model, which is perfect when replacing continuous flow gas water heaters with a Smart Electric.

*Calculated based on specific operating conditions. Real-world savings may differ. See specific conditions on our website at thermann.com.au/product-range/smart/#disclaimer
