

The healthiest
way to heat
your home.

With naturally even radiant warmth, nothing quite compares to the wonderful, luxurious feeling of Auspex Radiant underfloor heating.

Reasons to choose Auspex Radiant Underfloor Heating

Comfort

Underfloor heating provides you with the ultimate heating solution. Unlike forced air systems which simply warm and scorch air, underfloor heating uses radiant heat transfer to achieve a comfortable natural heat.

Efficiency

Through the use of energy efficient gas boilers you can get greater efficiency and return on cost through the life of the unit.

Health

Many Australians suffer from Asthma, hay fever and a variety of other associated allergies. Which is why underfloor heating is so good. Unlike ducted heating which spreads dust creating irritation and discomfort, you will ensure a safe and healthy environment for you and your family.

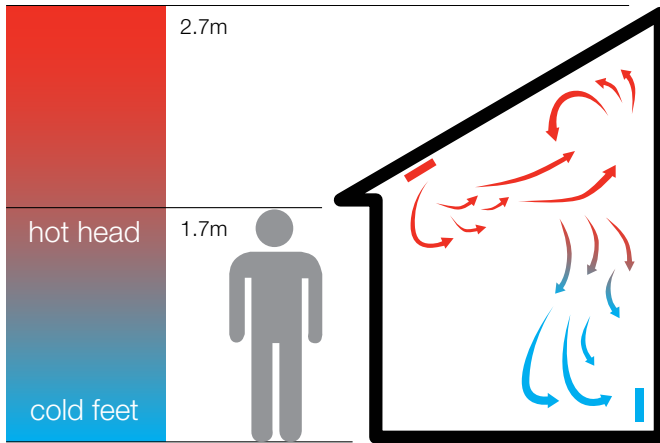

Design freedom

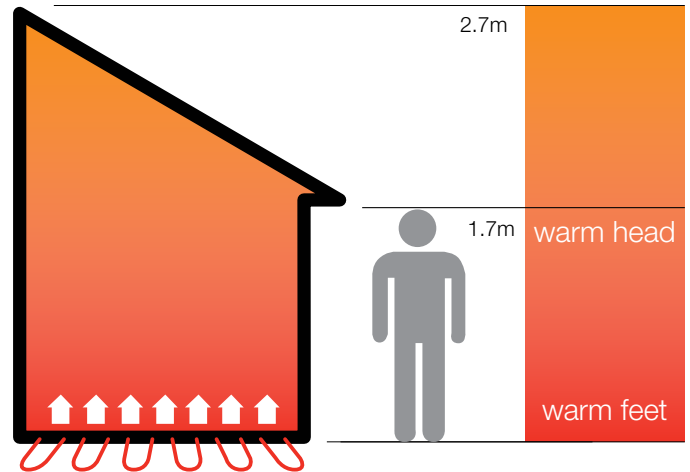

With no radiator panels on the walls or ducts in the ceiling and floor, you have complete design freedom in the space you're creating.

Forced air heating

Radiant floor heating

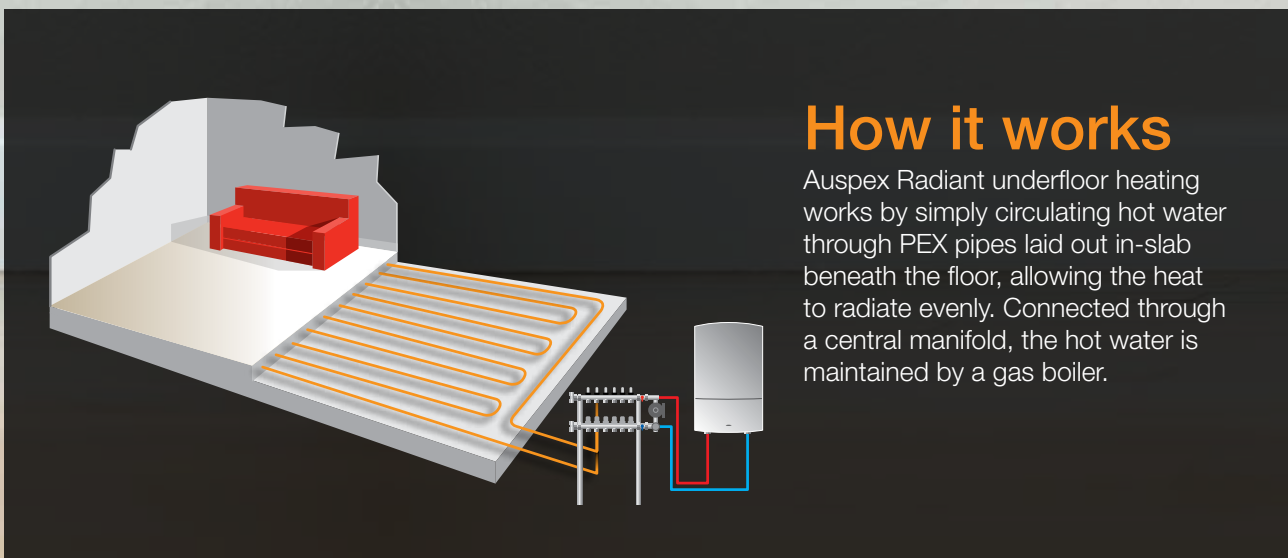

Hydronic vs Ducted

Because heat rises, underfloor heating is one of the most efficient ways to heat your home. Traditional air heating methods rely on forcing warm air throughout the house resulting in an uneven distribution and heat retention. This is particularly challenging for dwellings with high ceilings.

Without a constant even spread of heat, rooms are left susceptible to draughts and cold spots.

The underfloor system provides a constant natural even distribution of radiant heat, ensuring the ultimate comfort for your home.

How it works

Auspex Radiant underfloor heating works by simply circulating hot water through PEX pipes laid out in-slab beneath the floor, allowing the heat to radiate evenly. Connected through a central manifold, the hot water is maintained by a gas boiler.
