K65[®]-SYSTEM

THE TUBE SYSTEM FOR HIGH-PRESSURE

www.henrytech.com

Wieland

High-Pressure Tube System

In air conditioning/refrigeration, and in particular in the area of commercial or industrial refrigeration systems, more and more ecology-oriented concepts are being implemented, with the focus being on efficiency and environmentally friendly refrigerants.

The use of the natural refrigerant CO₂ (R744) leads to higher operating pressures, particularly in transcritical operation. The new K65 system, consisting of tubes and fittings, is particularly suited to these applications.

K65 is a high-strength copper alloy and enables simple, safe and economical installation of refrigeration systems with operation pressures of up to 120 bar (other pressure levels on request).

Applications

- Air conditioning and refrigeration, heating, non-hazardous refrigerants, in particular the refrigerant CO₂ (R744).
- Further media are possible after consultation with the manufacturer.

Material properties

Material designation	Composition
K65, CW 107C, CuFe2P UNS C19400	Fe 2.10 – 2.60 % Zn 0.05 – 0.20 % P 0.015 – 0.15 % Pb max. 0.03 % Cu balance
Standards	
EN	CuFe2P (EN 12449) CW107C
VdTÜV UNS*	Material Sheet 567 C19400

* Unified Numbering System (USA)

Temper*

K65 tubes = R300, according to EN 12449 and VdTÜV 567 (heat treated) and/or R420 according to EN 12449 (hard as drawn)

* The temper for K65 fittings is above the value R300 due to workhardening during manufacturing process.

Corrosion resistance

K65 is insensitive to stress corrosion cracking and exhibits high resistance to natural atmosphere.

Both the tubes and the fittings of the K65 system are TÜVcertified and, therefore, meet the requirements of the European Pressure Equipment Directive 97/23/EC.

K65 tubes and K65 fittings are clearly marked, so that the system components can be easily identified at all times.

Your benefits of using K65:

- Cost reduction and improved handling due to weight reduction
- Excellent heat transfer characteristics
- Known and user friendly processing technologies (e.g. brazing)
- Existing processes and equipment can be used
- Clear identification of the system components
- TÜV-certified

Physical properties*

Thermal conductivity	>260 W/(mK)
Density	8.91 g/cm ³
Coefficient of thermal expansion	17.6·10 ⁻⁶ /K

* Reference values at room temperature

K65 is slightly magnetic and can easily be distinguished from other copper materials (e.g. Cu-DHP) by means of a neodymium magnet – a helpful, practical advantage.

Processing

Proven joining technology – brazing!

K65 has excellent processing properties which are similar to those of pure copper. K65 tubes may be joined with K65 fittings through brazing. K65 fittings are manufactured by IBP Conex/Bänninger.

Silver-containing solders with a silver content of min. 2 % have proved to be very successful. Usually, no flux is necessary for the brazing of K65 tube and K65 fitting and the use of silver-containing CuP solders. For the joining of copper alloys such as brass the additional use of fluxes, e.g. FH 10 according to DIN EN 1045, is recommended. This ensures optimum filling of the capillary gap. Residual flux has to be removed after brazing (e.g. with a moist cloth).

The processing instructions for the installation of tubes and connecting tubes made of copper, e.g., according to EN 378 and DK1 information i164*, common for air conditioning and refrigeration, have to be followed. In addition, compliance with the basic requirements of the European Pressure Equipment Directive 97/23/EC has to be examined in individual cases. The safety precautions of high-pressure systems, particularly for pressure testing and commissioning have to be observed, if necessary by calling in experts.

* i164, Copper tubes in air conditioning and refrigeration for technical and medical gases

During brazing, it is imperative that the brazed joint is handled and heated properly. Additional heating and annealing of the tubes and the fitting body are not permitted.

Joining properties of K65

Brazing	excellent
Soft soldering	excellent
Inert gas welding	excellent
Resistance welding	good
Laser welding	good
