

Posh Solus Back to Corner Freestanding Bath

Important:

- Please unwrap the bath and check it carefully to ensure it has not been damaged in handling or transport.
- Please check that all parts have been supplied.
- Assemble bath on a mat to protect against damage to bath surface.
- Please do not remove the old fixture before you unpack and inspect the new unit.
- Store the bath in a safe place until you begin installation to avoid damage.
- Any installation should be carried out by a qualified tradesman with knowledge of statutory plumbing requirements in your area.
- This installation guide does not include details of waste connection; final decision about installation of waste connection should be taken by a suitably qualified person.

Installation:

- Install waste pipe and trap - taking into consideration the waste position of the bath. Make sure that the surface where the bathtub will be placed is perfectly flat, clean, free of any excess humidity and offers adequate support.
- Ensure the corner wall where the corner bath will be against is straight so bath can locate right into the corner, or this bath type cannot be installed.
- Ensure all adjustable bath feet are level and load bearing. This can be done by using a spirit level on a flat surface on the top of the bath. Check the bath is level along each axis.
- To make any height adjustments, the bath feet can be rotated to raise or lower the feet. Adjust bath feet until bath is 3mm above the floor and once bath is level and the feet are in the correct position, the locking nut can be tightened with a spanner to prevent the feet from moving further.
- Measure the location of the bathtub feet in relation to the desired installation position. Mark on the floor the location of the feet and use a marking pencil to draw a bath outline on the floor around the bath base.
- Lift and tilt bath up on its side and fit the waste. Water test the bath to check that it is draining correctly without any leaks.
- Silicone seal the bath with the corner wall and in position onto the floor and into 3mm gap between base of bath and floor to seal it. Allow seal to fully cure for 24 hours before use.
- A suggested bath component list for Slab floor or 2nd storey bath connection or Timber floor with clear access underneath is listed below:

1. Slab floor or 2nd storey suggested bath connection component list:

- 1405525 DWV Adaptor PVC X FI 40mm
- 1400105 40mm DWV PVC pipe (installer to cut to length)
- **Slab floor or 2nd storey bath connection**
