Installing the Timer

Carefully remove the back of the timer by placing a flat head screwdriver into the slots on the bottom of the unit and push to release.

Unplug the cable connector from the back of the timer screen.

Connect the Mizu towel rail to the timer as seen in the below wiring diagram.

Installing the Timer

Please note the timer is a 240Volt unit, so both the input and output voltage is 240Volt and it DOES NOT have a transformer incorporated in the unit. For a low voltage towel rail, the towel rail needs to be wired directly to a suitably rated transformer. A lead from the 240Volt side of the transformer is then wired into terminals 3 & 4 of the timer, so the transformer is positioned between the towel rail and the timer.

Screw the back plate of the timer to the electrical plate.

Plug the cable connector into the back of the timer screen and connect the screen to the back of the timer.

User Interface: Portrait

1. Day indicator
2. Key lock icon
3. Schedule mode icon
4. Manual mode icon
5. ON/OFF indicator
6. Confirm settings
7. Program button
8. Mode button
9. Power button
10. Up & down arrows
11. Time
