

INSTALLATION GUIDE

Milli Pure Hob Spa Outlet

Tapware is to be installed by a Licenced Plumber in accordance with AS/NZS 3500:2003

**Recommended working water pressure 300 - 500 Kpa.
Maximum water temperature is 65 deg.C.**

PREPARING INSTALLATION

- A 1/2" BSP Male Thread is required to protrude through the finished Hob surface by 10-20mm.
- Apply adequate thread sealant (Teflon Tape) to the protruding 1/2" BSP thread.
- Ensure the Finished Hob Surface is sealed using an appropriate Silicone.

FITTING OFF

The Outlet is supplied assembled. No parts need to be removed. Fit the Outlet to the male 1/2" BSP thread protruding through the Hob. Note: The Outlet must be tightened with the "FRONT" label facing the operator. The Base Flange has 2 flats to assist when tightening. Lower the Cover Flange and tighten the set screw to complete the installation. Once installed, check function of the Outlet and check for water leaks.
