# INSTALLATION INSTRUCTIONS

**Note: All measurements are taken from finished wall and floor. If fixing to timber framed walls or partitioning, the wall should be reinforced with noggins to receive fixing bolts/screws.**

- Drill holes into walls at a suitable height into fixing centres and install fixing bolts supplied (fig 1).
- Fit selected tapware to basin. Fit the selected waste, with overflow if required to basin ensuring it is sealed with silicone on top.
- Carefully align basin complete with fittings onto protruding bolts.
- Insert nylon bushes and locking nut and partially tighten lock nuts to hold basin into position. Make minor adjustments at this stage to ensure basin is level and then fully tighten lock nuts. Do not over tighten.
- If desired all visible external edges can be joint sealed using flexible sealant ensuring to wipe off any excess.

Basin dimensions provide acceptable access under basin when fitted to the specified mounting height from finished floor in AS1428.1.
