

Kado Arc Timber Vanity Unit

TIMBER CARE AND MAINTENANCE

Your solid timber vanity is guaranteed against faulty workmanship for a period of seven (7) years provided that the vanity has been installed by a licensed tradesperson and according to the installation instructions provided.

Your timber vanity has been manufactured from kiln dried strips of solid timber and coated multiple times with a 2-part polyurethane. The coating has been laboratory tested to withstand most household chemicals, detergents, oils and hot water, but these should be wiped off immediately wherever possible. Normal maintenance is minimal, requiring only a regular wipe down with an absorbent cloth or towel. It is designed to give excellent long-term service.

TIMBER BENCHTOPS

On timber benchtops, be sure to remove pooled water and build-up of soap/toothpaste scum. If completely necessary, wipe with a liquid spray cleanser. It is possible that over time with constant rubbing of cleansers a burnishing effect may occur which will result in a soft lustre or patination. This is normal and will not affect wear but add to the character of the top.

In the event that a heavy object is dropped on the top, this may leave a mark or dent in the surface. As long as the coating is not broken, there is no action required to maintain the performance of the top. If the seal is broken, it can always be repaired by sanding and repolishing, but this should be left to a specialised tradesperson (e.g. furniture polisher).
