Up to 75,000	15 Bags = 225kg	15 Bags = 225kg

Important notes

When the need arises to top up your pool with Henden Mineral Salt or Henden Mineral Activator, due to dilution through rainfall or backwashing, Henden recommends you use equal quantities of Mineral Salt to Mineral Activator (ratio 1:1) and that you maintain your TDS level between 4,000 and 6,000ppm. This will ensure your mineral pool water stays soft, silky and crystal clear.

After adding Henden Mineral Salts to your pool, the water may temporarily have discolouration and form clusters of foam on the surface. This is completely normal and is part of the mineralisation stage and transformation process. This may last up to 4 days, however after this time, your pool will return to normal and become crystal clear and clean. It is recommended that you run your filter pump for a minimum 24 hours after the addition of Henden Mineral Salts.
