

Shower Set Cleaning and Installation Instructions

When installing a Shower Set, it is imperative that the pipes are bled slowly to relieve the pressure. Failure to perform this operation could lead to the shower head being distorted or blown apart.

With correct installation and proper care all products should provide years of good service.

Responsibility will not be accepted for incorrect installation of this Tapware, or any Tapware **not installed by a REGISTERED PLUMBER.**

Cleaning

The product you have purchased has been designed to provide many years of dependable service.

However, the finish requires care to be taken to delay the wear that will eventually occur overtime.

Whilst all colours finishes are durable, cleaning with a non ammoniated pure soap liquid is recommended to remove any stains or water spots.

Ensure to rinse all traces of soap thoroughly. Use a soft cloth to clean and dry the product.

DO NOT use any abrasives such as bleach or any scouring cloth/pad to clean the product as it will scratch the surface.

Polishing with MR SHEEN™ is helpful in preventing water spots on all finishes.

Due to large amounts of impurities in the water, regular cleaning of aerators and shower heads is also recommended.

Plumbers, please ensure a copy of the installation instructions is left with the end user for future reference
