EDGE MIRROR WITH CLOCK

WARNING

This mirror must be installed by a qualified electrician in accordance with AS/NZS 3000 wiring rules. Switch off the electrical supply at the mains before installation and maintenance. A means of disconnection must be incorporated in the fixed wiring in accordance with the wiring rules. Suitable for bathroom and non-bathroom/dry areas. Not suitable for above baths, nor for installation in saunas, steam rooms or shower cubicles. Please consult with a qualified electrician to confirm appropriate compliant installation location.

Do not connect to a plug and socket outlet. Rated IP44 and suitable for indoor use only. Do not fix to damp or conductive surfaces. Site well away from curtains and fabrics. Never cover the mirror. Switch off after use. Do not leave on for prolonged periods. This appliance is not to be used by persons (including children) with reduced physical, sensory or mental capabilities, or lack of experience and knowledge, unless they have been given supervision or instruction. Children should be supervised to ensure that they do not play with the appliance.

IMPORTANT!

Inspect the product immediately upon receipt for transit damage, missing parts or manufacturing faults. Handle the product with care and protect against knocks to all sides and edges of the glass.

Please ensure a copy of the installation instructions is left with the end user for future reference

EDGE MIRROR WITH CLOCK

OPERATION

Infrared mirror light on /off sensor

Moving your hand in proximity of the sensor turns the mirror light on and off.

When turning on the lights, if you keep your hand in front of the sensor, after a few seconds, the LED intensity will change. Once the desired intensity is reached, move your hand away from the sensor and the mirror will save that particular intensity.

The next time the mirror is turned on it will return to the programmed intensity.

Please note, that the mirror must be installed not less than 150mm from the wall or bathroom furniture column, otherwise the sensor will read the object and will not function properly.

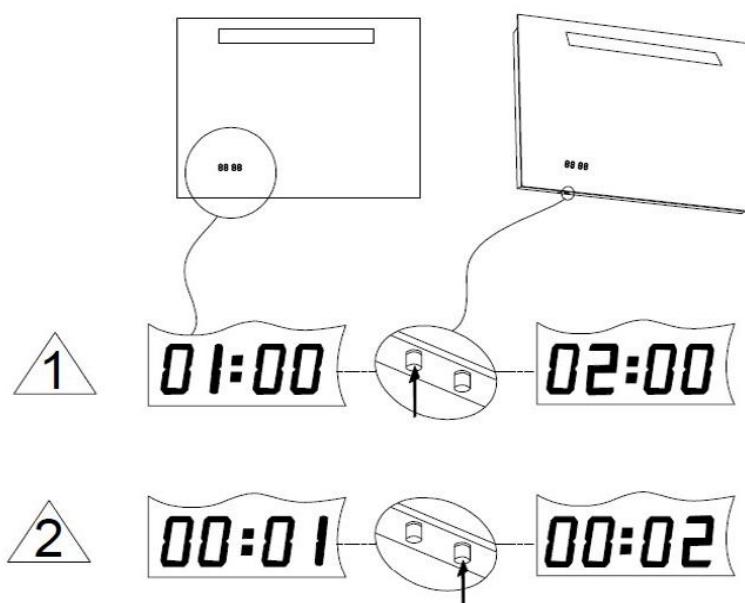

NOTE: It is normal for top and bottom LED to have partial illumination even in the off position due to small current through the IR on /off switch.

Defogger on off switch

The defogger is switched on and off with a toggle switch, mounted on the side of the mirror, which is illuminated red when the defogger is operating.

Setting the clock

Please ensure a copy of the installation instructions is left with the end user for future reference
